

History. Service. Innovation.

Carboline was founded in 1947 by Stanley Lopata in St. Louis, Missouri when he developed a product to solve a customer's problem. A few years later, another product was developed and patented that not only solved a problem but revolutionized the painting of structural steel, both in the shop and in the field. That product was Carbozinc[®] 11, the first self-curing, inorganic zinc primer on the market. Since the '50s, Carbozinc 11 has been used on high-profile projects and many remain in service today.
