

History. Service. *Innovation.*

Storage tanks, especially tanks that hold petrochemicals, process water, acids or caustics are assaulted by corrosion constantly. Our new innovative **Phenoline® Tank Shield** is a single coat, non-blushing lining that has wide chemical resistance. It has excellent flow properties for pitted steel (critical for relines). It can be sprayed using standard airless equipment, and will cure quickly, even at low temperatures, making it a great solution for owners and a field-friendly product for contractors.
