

History. Service. Innovation.

Carboline has been making high performance coatings and linings for 70 years. As shown in this picture from our archives, circa 1970, we have a long history of coatings for bridges and highways. This bridge, Hurricane Deck Bridge, in Camdenton, MO, was coated with our Carbozinc® primer. From coast to coast, our products continue to be the first choice in coatings for owners, specifiers, fabricators, and painters for both new construction and maintenance painting of bridges.
