

# *History.* Service. Innovation.

Carboline has a 70 year history of developing and supplying high performance coatings. One project from our archives, circa 1962, is the Union Electric (now Ameren Missouri) Meramec coal burning power plant in St. Louis, Missouri. Our coatings and linings were used on this project, which at the time, was one of the most advanced state-of-the-art coal burning plants. Our high temperature coatings, tank linings, maintenance coatings, and industrial fireproofing products provide protection on facilities just like this that are exposed to extreme conditions.
